What is Cloud Migration?

Cloud migration is the process of moving business data, apps, and systems from on-site servers or old IT setups to the cloud.

Cloud Migration Process

Assessment

Audit your infrastructure and set clear goals.

Planning

Choose a provider (AWS/Azure/GCP) and migration strategy.

Execution/Migration

Transfer data securely and test rigorously.

Optimization

Fine-tune performance and automated processes.

Cloud Migration Types

Rehosting

Move apps "as-is" (ideal for legacy systems).

Replatforming

Minor optimizations (e.g., managed database).

Refactoring

Rebuild for cloud-native scalability.

Repurchasing

Switch to SaaS (e.g., Salesforce)

Retiring

Decommission outdated systems.

Retaining

Keep apps on-premises (for compliance).
